Abstract

VR Shooter Guns was built from ground up for VR and arcade use. It's a VR first-person shooter in a SciFi setting. Our treadmill version for the Virtualizer from Cyberith is already playable in arcades across the world.

Now we are proud to announce that the roomscale version is available on Steam.

Game Description

The player has to fight his way through a space station to escape evil robots!

In a distant future, petty humans only exist to consume what gigantic automated robot facilities are producing. These vast factories floating in space have been built by generations of both, humans and robots.

The player is one of those solitary humans, whose job has not yet been replaced by androids. Alone in space, only there to supervise the production during endless boring shifts.

And the Artificial Intelligence watches him.

Nothing ever happens.

Until NOW.

Cool features of the game

- Seven languages: English, French, German, Portuguese-Brazil, Russian, Simplified Chinese, Spanish
- Four challenging levels
- 15 and 30 Minute runs for highscore
- Endless permadeath mode for skilled players
- Increasing difficulty with each round
- Global Highscore
- HTC Vive and Oculus Rift supported
- Built from the ground up for virtual reality!
- Perfect for social VR challenges with your buddies!

Cykyria

Cykyria is an independent virtual reality studio founded in 2014 by Benedikt Engelhard and located in Nuremberg, Germany. We are focused on virtual reality entertainment at home and out-of-home such as rental and VR arcades. Our games are built from ground up for VR and embrace the arcade style of gaming.

Our goal is to make really awesome games which are challenging the player to master their skills and top their own highscore again and again.

Virtual reality will change our lives and we will make it real.

We are ready – are you too?
